Agreement Reached Between AVANTech and Utilities Service Alliance

Columbia, SC – AVANTech and Utilities Service Alliance (USA) are proud to announce the successful execution of a Wastewater Treatment Equipment and Services agreement. AVANTech is excited to do its part in Total Cost of Ownership (TCO) savings as a USA supplier. Our commitment is to provide the USA members cost reductions relating to AVANTech-provided products and services that can allow each member to produce electricity as cost effectively as possible.

Utilities Service Alliance (USA), Inc. is governed by a Board of Directors comprised of executives from the member utilities. Their mission is to provide a business platform for their members to collaborate in plant performance and economic benefit initiatives. By being a part of the Alliance, **USA's member utilities get the best of both worlds: fleet benefits while keeping the flexibility of** their independent operator status. This gives members the ability to: retain local control at each site while benefiting from economies of scale; have collective influence in the industry while still maintaining single nuclear site status; selectively choose projects and initiatives; share existing resources without transferring ownership; share the experiences, lessons learned, and benchmarking like a large fleet.

AVANTech, LLC – AVANTech is a rapidly growing US-based technology company with extensive experience in the design, fabrication, and operation of nuclear systems such as: makeup water, liquid radwaste treatment, spent resin dewatering, waste containers, high integrity containers (HICs), remote container grapples and capping equipment, NRC-approved solidification/encapsulation, and design, fabrication, and leasing of all varieties of shields and shielded transport **casks. All activities are implemented in accordance with the company's ASME NQA-1, 10CFR50 Appendix B, DOE Order 414, 10CFR830.120 Quality assurance Program, as applicable.** AVANTech is proud to complete all design and fabrication in house, giving AVANTech a competitive edge by eliminating the need for subcontractors, thus enabling better control of schedule, quality, and cost. **Being able to perform all work "under one roof" is especially important for dispositioning last-minute design changes that inevitably take place on innovative and first-of-kind process solutions.**
